

# Data Sheet

## The fastest automated PC recovery solution - managed on or off the network.

Practically every employee around the world relies on a desktop or laptop to do their job. If an end-user's PC is down or slow, it could take hours or even days to diagnose and fix the issue, resulting in user downtime and increased costs related to the time spent on support calls.

Persysent Suite is a software solution that enables a PC to repair itself, automatically restoring to the configured repair point at each boot cycle, self-correcting problems to keep PCs healthy, end users productive and help desk calls down.

Persysent Suite also controls compliance issues, saves energy by shutting down idle PCs and makes imaging a breeze.

### AUTOMATED PC RECOVERY SOLUTION

Persysent Suite's automated repair feature is not dependent on a network connection or a functioning OS to work. You can set it to recover automatically or on demand to the previous repair point.

- Eliminates need for manual re-imaging
- Recovers in less than 30 seconds
- Only recovers corrupted, changed or missing files
- Details are logged & available for audit or reporting

### HIGH SPEED IMAGING SOLUTION

Imaging is a breeze with Persysent Suite. The entire imaging process is completely automated from end to end - with customizable client build tasks that allow for scripted boots and installations.

- Build or rebuild machines with single PXE boot
- Integrates with many software deployment solutions
- Includes an automated recovery feature in the event of deployment and patch failures

### COMPLIANCE SOLUTION

Managing corporate policies and compliance configuration is made easy with Persysent's web-based management console. At each boot cycle the configuration is restored.

- Ensure application availability and user productivity
- Maintain PC compliance without expensive technical support or configuration monitoring

**How to contact us:** call 866-288-3067 or visit [www.persysent.com](http://www.persysent.com)

## Key Features

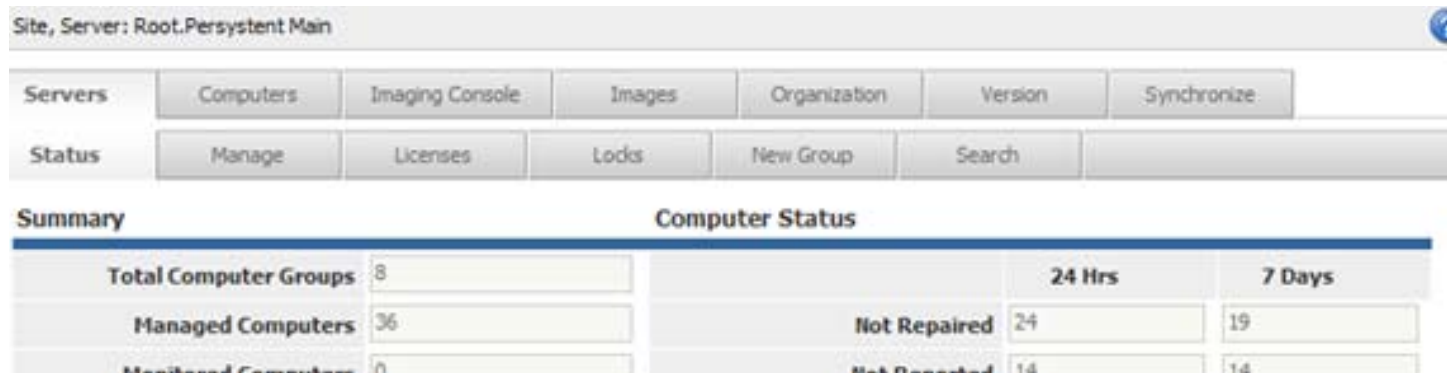

- Fastest repair – less than 30 seconds
- Repair occurs pre-boot of the OS
- Client/server architecture
- On-demand disaster recovery
- Remote, automated power on & off (green computing)
- Multi-cast and session broadcasting
- File level imaging
- Supports Windows 2000/XP/Vista
- “Repair Point” image is compressed 2:1, located in a hidden cache and on the server
- Preserves user data and settings
- Single instance file storage - saves disk space

## Benefits

- Eliminate OS and application related downtime
- Reduce the need to ship laptops in for repairs
- Ensure that users remain productive, no matter when and where they work
- Reduce the number of expensive support calls and desk-side visits
- Reduce deployment costs by automating the imaging process
- Virtually eliminate the need to re-image PCs
- Automatically enforce your corporate configuration
- Provide an added layer of security
- Improves success rate of patches and updates

## Administrative Web Console

From the centralized web-based administration console, IT administrators can set policies, schedule tasks, schedule updates and run reports.
